

For a better working environment

air curtain design

standard models

This elegant slimline range of powerful modular air curtains, built to a high quality are suitable for pedestrian doorways up to a height of 2.7 metres and a width of 2 metres. They are used in shops, offices, retail outlets, manufacturing facilities, reception areas and warehouses. These units are available with hot water coils or electric heaters and finished in a high quality epoxy polyester powder RAL 9010. (Other colours are available on request).

This range meets with the specifiers and end users needs – low cost, continuously rated, easy to install and service.

high duty models

The high duty models enjoy most of the features of the standard range of air curtains, in that they retain their elegance and high quality but are more robust and built to offer high performance. Ideal for use in warehouses, petrol/railway stations and general industrial applications. Suitable for a height of up to 4 metres and a width of 2 metres. These units are supplied with hot water coils or electric heaters and are epoxy powder coated RAL 9010. (Other colours are available on request).

These units can reduce energy costs and save money. Like all Air Curtain Design products this range is easy to install and service.

recessed models

Air Curtain Design recessed air curtains use the same high quality components as the Standard and High Duty models on previous pages. They are specifically designed to fit into small recessed ceiling areas having a depth of only 25cm (30cm on the High Duty model).

Supplied with a drop down hinged, linear grill for ease of installation and

servicing. This compact recessed range for ceiling heights up to 4 metres is suitable when an unobtrusive air curtain is required. These units are supplied with hot water coils or electric heaters.

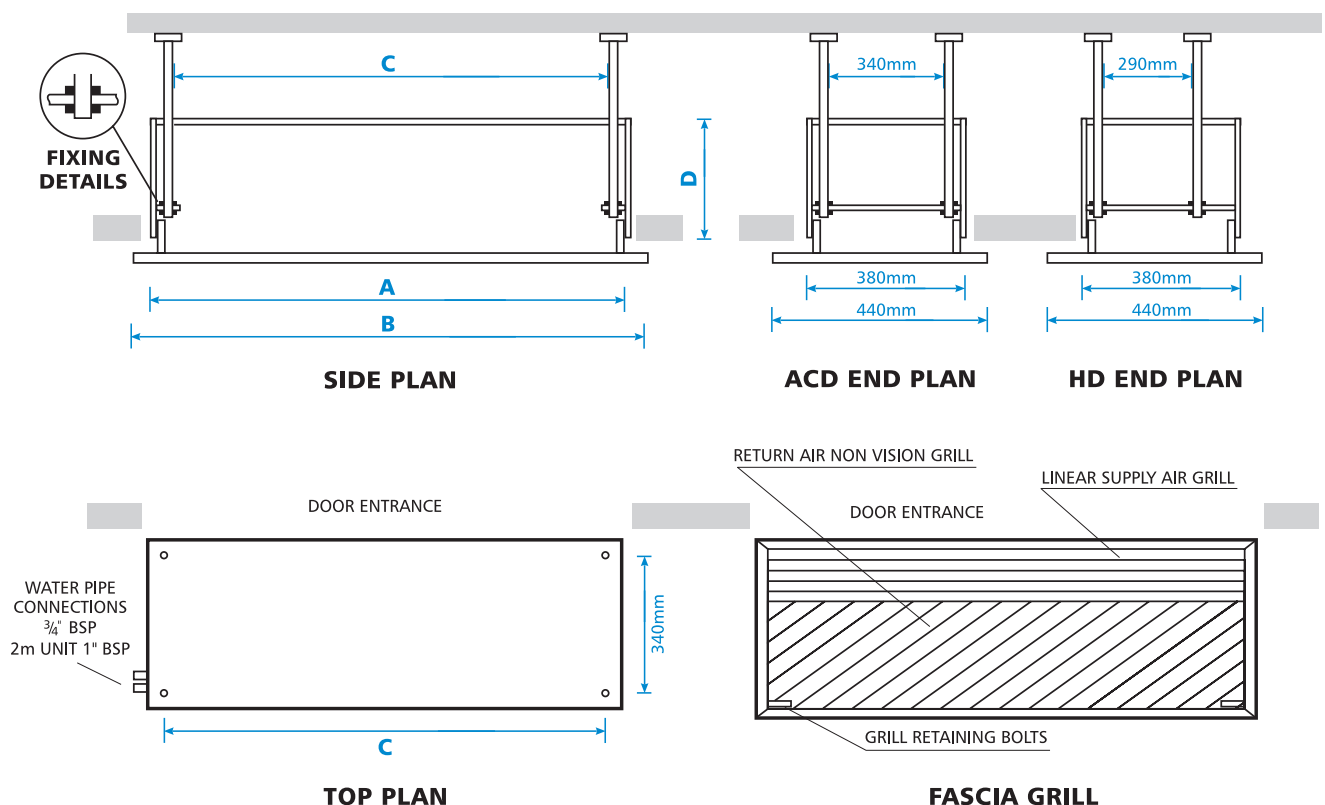

Linear grill finished in a high quality polyester powder coat RAL 9010. (Other colours available on request).

controls & wiring

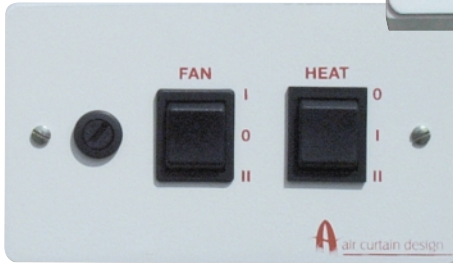

Air curtains are supplied with remote control panels as standard and can be flush or wall mounted. Ambient and water heated units have a three position switch

Each control panel can be used to control single or multiple units.

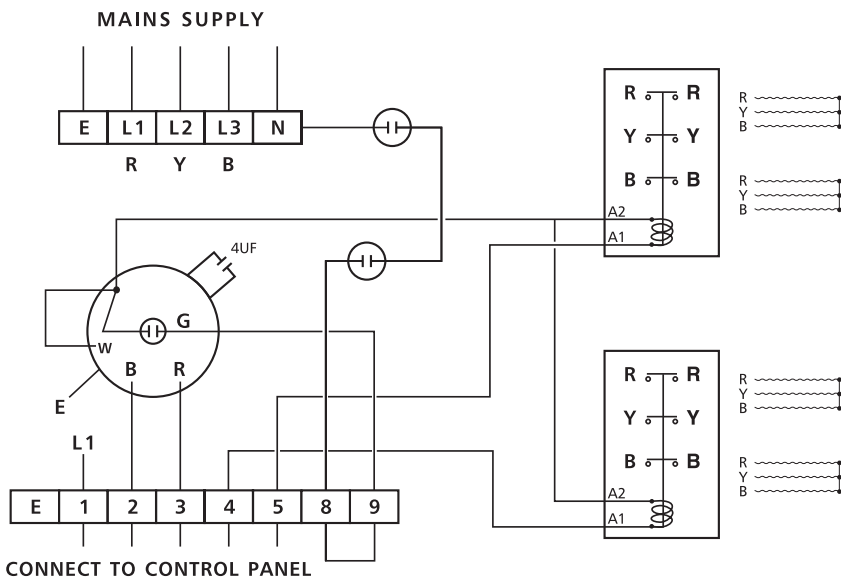

ADDITIONAL CONTROLS

Thermostatic and valve controls, door switches and BMS volt free contacts (enable/disable/fault). All available on request.

giving slow fan speed/off/fast fan speed. Electrically heated units are supplied with an extra three position heat switch offering off/low heat/high heat.

cold store models

The Air Curtain Design range of cold store air curtains are specifically designed to protect refrigerated or air conditioned areas and other temperature controlled environments. This is achieved by preventing the ingress of warm air and the loss of refrigerated or conditioned air. These units are easily installed over door or side mounted. They are suitable for cold food ripening areas, chill rooms, food preparation areas and warehouses. This range may also be used as an insect barrier to help prevent insects and flies from entering food preparation areas. The units are finished epoxy powder coated white and can be supplied in stainless steel. They are available to suit most apertures.

Industrial air curtains are manufactured for large cold store apertures where temperatures can be as low as -40°C and door heights of up to 6 metres.

industrial air curtains

This modular range of industrial air curtains will suit doors/apertures up to 6 metre high. They are ideal for installation in warehouses, depots, unloading bays, factories and large cold store areas. These units will assist in preventing energy losses by stopping infiltration of cold air and retaining conditioned air using recirculated air. This cost effective and unique modular range is aesthetically pleasing, efficient and simple to install. High quality centrifugal fans are used throughout the range. Units are available as ambient (unheated) or heated using LPHW/MTHW/super heated water and steam. Electric heated units are available on request.

architectural range

The company's architectural range of air curtains meet architects' requirements for neat, unobtrusive, efficient installations suited to stylish designs for contemporary buildings.

Other applications for this type of unit are shops, offices and retail outlets which require high performance, energy efficient solutions.

Products can be supplied in either mirror polished or brushed finish stainless steel or colour coded to meet most RAL colour schemes.

Units can be mounted either over-door or vertically beside the door.

This range can be supplied with either LPHW or electric heating.
